INTRODUCING

FlowKeys

The mechanical keyboard sound you love. On the Mac you already own.

THE PROBLEM

Mechanical keyboards sound incredible. They also cost a fortune.

That satisfying click on every keypress makes typing feel alive. But a good mechanical keyboard will set you back anywhere from $80 to well over $300. Custom builds? Even more.

And if you already have a MacBook with a perfectly good keyboard, buying another one just for the sound feels unnecessary.

$80 – $300+

Average cost of a mechanical keyboard

vs.

Free

FlowKeys. Same sound. Zero cost.

THE SOLUTION

Every keypress. A satisfying click.

FlowKeys runs quietly on your Mac. Every time you press a key, it plays a crisp mechanical keyboard sound through your speakers. No extra hardware. No expensive purchases.

Mechanical

Classic Cherry MX clicky. The sound you hear in every coding video.

Soft

A quieter, gentler tap. Perfect for late nights or shared spaces.

Switch between sounds instantly. Turn it off during calls. Turn it back on when you're in the zone. FlowKeys starts automatically with your Mac — nothing to remember.

SETUP GUIDE

Up and running in 5 minutes.

You'll download FlowKeys from GitHub — a website where developers share projects. You're simply downloading a folder. No account needed.

Step 1 — Download

1

Get FlowKeys from GitHub

- Open **github.com/rhalder90/FlowKeys** in your browser
- Click the green **Code** button
- Click **Download ZIP**
- Open your Downloads folder and unzip the file

Step 2 — Install Python

2

Make sure Python 3 is installed

FlowKeys is built with Python. Most Macs already have it.

Open **Terminal** (press `Cmd + Space`, type Terminal, press Enter) and run:

```
python3 --version
```

If you see a version number, you're good. If not, download Python from **python.org/downloads**

Step 3 — Install FlowKeys

3

Double-click install.command

Open the downloaded FlowKeys folder and double-click **install.command**. A Terminal window will open and handle everything automatically. Takes about 30 seconds.

Step 4 — Grant Permission

4 Allow Accessibility access (one-time)

The installer opens System Settings automatically. FlowKeys needs permission to detect your keypresses.

- Click the **+** button
- Press `Cmd + Shift + H` to go to your home folder
- Open **FlowKeys** → select **FlowKeys.app**
- Click **Open**
- Make sure the toggle is **ON** (blue)

> **Tip:** You only do this once. The permission survives restarts and updates.

Step 5 — Done

✓ Start typing

That's it. You should hear a mechanical click on every keypress. FlowKeys starts automatically every time you turn on your Mac.

SHORTCUTS

Two shortcuts. That's all.

SHORTCUT	WHAT IT DOES
`Cmd + Ctrl + K`	Turn sound on or off
`Cmd + Ctrl + S`	Switch between mechanical and soft

UNINSTALL

Changed your mind? No worries.

Open Finder, press `Cmd + Shift + H` to go to your home folder, open the **FlowKeys** folder, and double-click **uninstall.command**.

Everything gets cleaned up. No leftover files.

NEED HELP?

We're here for you.

No sound when you type? The most common reason is the Accessibility permission from Step 4. Go back and make sure FlowKeys.app is added and toggled ON.
